

Itamar Gil

 New York City, NY  itamargil8@gmail.com  (646) 249-1329  [@itamar-gil](https://www.linkedin.com/in/itamar-gil)  [@itamargilvybe](https://github.com/itamargilvybe)

Full-stack software engineer with deep experience building and scaling modern web and mobile applications (React, Node.js, Django, SwiftUI). Led development from MVP to 50K+ MAUs, shipping across iOS and web. Strong technical execution, leadership in product direction, and focus on the user. Seeking remote or U.S.-based full-stack roles at product-driven, high-impact engineering teams.

Experience

Landa *Full Stack Engineer*

September 2024-Now

Real estate investing platform

- developed core frontend modules in React and TypeScript, integrating with GraphQL APIs to deliver responsive, data-rich interfaces used by 10,000+ active users.
- Redesigned and optimized key UI workflows, improving usability across desktop and mobile.
- Contributed to end-to-end testing strategies and CI/CD pipelines, reducing release times by 40%.

Freelance Projects *Full Stack Engineer*

July 2023-September 2024

- PieAssets - built a real estate investment platform from the ground up.
 - Shipped a fully functional MVP in under 90 days using Next.js, Supabase, and Tailwind CSS.
 - Delivered a responsive UI across desktop and mobile, contributing directly to fundraising.
- Profound - optimized performance of an AI SEO platform.
 - Reduced median page load time by 60% by refactoring the data layer (PostgreSQL, Supabase Edge Functions) and implementing route-level caching.
 - Led a full JavaScript-to-TypeScript migration, improving maintainability and onboarding.
 - Supported onboarding of first enterprise client by delivering a tailored, production-ready demo.
- Vybe Community - re-architected a social discovery app using SwiftUI, UIKit, and MongoDB Atlas.
 - Migrated legacy code and built reusable components for real-time feed and event discovery.
 - Designed a scalable creator monetization framework with tiered access, integrated payments, and analytics tracking.
- Chillz - delivered internal automation systems for an event ticketing platform.
 - Built robust TypeScript workflows for CRM automations, saving the ops team 10+ hours/week.
 - Temporarily led support ops, introducing internal tooling and AI-powered support chat, cutting response time by 50%.
 - Facilitated coordination across dev teams in the U.S. and Ukraine, ensuring successful delivery.

Vybe Together *Co-Founder, Full Stack Engineer*

January 2021-June 2023

Social party app with viral growth to 50,000+ MAUs, acquired

- Led full-stack dev of mobile (SwiftUI, UIKit) and web (Next.js, React) platforms.
- Migrated backend from Firebase to MongoDB + Realm for scalability, reducing response times by ~30%.
- Managed the engineering team and coordinated closely with design and sales to iterate on product features. Leveraged analytics and user feedback to prioritize a roadmap that drove a 20% increase in user engagement quarter over quarter.

Kama Dating *Co-Founder, Full Stack Engineer*

2019-2020

Dating and venue matchmaker app

- Shipped MVP to App Store in under 8 weeks, combining Cordova and native Swift to overcome plugin limitations and ensure App Store compliance.

- Built backend services with Firebase, enabling authentication, user matching, and push notifications with real-time updates.
- Designed and integrated a restaurant booking system, using Twilio automation and web scraping to support real-time availability at local venues.

The Phoenix (via Matrix) Software Engineer

2018-2019

Israel's leading insurance company

- Developed and maintained business-critical BPM workflows using IBM BPM, JavaScript, and SQL, supporting thousands of internal users in claims processing, underwriting, and customer onboarding.
- Proposed and delivered a custom JS-based UI enhancement that replaced a multi-step manual process with dynamic form logic — resulting in a 30% reduction in input errors and faster claims resolution.

IDF Mamram & Mazpen Software Engineer

2015-2017

- Built and maintained C#/NET-based military systems used by 100,000+ users.
- Led deployment of a new secure Windows Server environment - completed in under one week with zero downtime, ensuring continuity for essential operations.
- Diagnosed and resolved critical production issues in legacy systems that had been neglected for months; introduced code refactoring and system tests that improved uptime and stability.

Skills

Languages & Frameworks: JavaScript (React, Next.js, Node.js, TypeScript), Python, Swift, SQL, NoSQL, Django, HTML, CSS

Databases: PostgreSQL, MongoDB, Firebase, Supabase

Data Visualization & UI Libraries: Chart.js, Tailwind CSS, Figma, Base Web

API Development: RESTful APIs, GraphQL APIs, AWS Lambda, Firebase Functions

DevOps: AWS (S3, EC2, Lambda), CI/CD (ArgoCD, Git Actions), Git

AI: Claude + OpenAI API, PromptLayer, LangChain, LangSmith

Other Tools: Figma, Photoshop, Premiere, After Effects, Jira, Git Issues

Languages: Hebrew, English

Education

- **Columbia University:** undergraduate studies in computer science & psychology
- **IDF:** certificate studies in computer science
- **Google:** project management certificate

Community & Projects

- **Jews In Tech •** Board Member • 2023–Present: scaling to 3K+ members, leading tech ops.
- **Hobby Projects:** mindcheck.co (mindfulness), sendusreviews.com (SMS)
- **Sports:** Former Israel youth water polo champion
